cpX.Energy – the cloud platform for energy traders

Digitisation and energy transition are changing the existing value chains. In addition, customers expect products of a completely new quality. Digital platforms ensure this quality. They bundle process steps and enable interaction with new technologies in the energy industry.

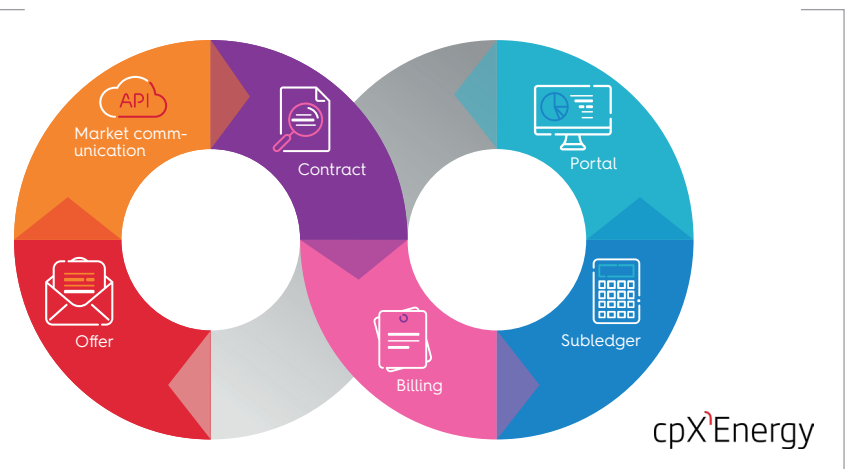

The cpX.Energy platform offers a comprehensive end-2-end solution portfolio for energy traders and covers the complete energy sales life cycle: from the offer, contract and invoice to the remittance advice – all in the cloud.

The openly designed platform orchestrates all functions for utilities to be able to carry out supplier processes in the business customer

segment (B2B/SME). cpX.Energy allows process mapping for both complex individual and highly standardised contracts for commodity and non-commodity products.

By bundling functionalities on the cloud platform, you reduce the number of process interfaces and thus you reduce costs. cpX.Energy also integrates seamlessly into your business processes. This is ensured by standardised services, such as an interface to your customer relationship management system, support for digital sales channels and integration into your corporate reporting and portfolio management.

cpX.Energy – the complete solution portfolio for energy suppliers

cpX.Energy – the cloud platform in detail

The digital platform cpX.Energy from Sopra Steria offers a comprehensive portfolio of cloud solutions. This includes offer calculation, contract management, billing with integrated market communication, current account accounting and a customer portal.

Offer

Offer management: manual or automatic creation of offers including offer structure (offers - variant - batch - locations - product)

Market communication

Change of supplier (UTILMD and ORDERS): Triggering of registration and termination of the current supplier agreement after winning offer, deadline monitoring, change notifications, communication of meter readings, etc.

Contract management

The contract arises directly out of the offer. Tranches are fixed in current contracts via the sales desk or the customer portal.

Billing

Invoice creation, invoice forwarding and invoice verification: automated billing via billing plans, forwarding to output management (PDF, ZUGFeRD), import of electronic invoices (INVOIC) for verification and billing

Subledger & receivables

Subledger: Posting of prepayment plans and invoices, payment tracking, integration of general ledger - banks - debt collection

Portal

Integration of portal functions for contract management, invoice verification, document management and incident management

Your benefits

- Cloud-based Software-as-a-Service solution with scalable usage model and flexibly configurable service portfolio
- Consistently high performance thanks to cloud technology with intelligent auto scaling and load balancing
- Reduction of costs by standardising process steps on the platform and avoiding complex interfaces
- Open platform architecture: easy connection of third-party systems via standardised web services
- Transparency in contract processing by bundling the essential processes for the sale of energy products in the platform with direct market communication and customer portal connection
- Joint mapping of individual business customers, standardised industrial and commercial customers and highly complex bundle customers in one platform

About Sopra Steria

As a leading European management and technology consulting company with 45,000 employees in 25 countries, Sopra Steria supports its clients in driving the digital transformation and achieving concrete and sustainable results.
